Australian Cable Tray Classification

Overview

Wire Mesh Tray (Basket Tray): Made from a grid of steel wires, this type is lightweight, super flexible, and can be easily cut and shaped on-site. Perfect for data cabling and lighter-duty jobs. Solid Bottom Tray (Unvented): Offers the most protection for sensitive. Cable trays play a crucial role in modern electrical infrastructure by providing organized and secure support for cabling systems across industrial, commercial, and infrastructure projects. At Solar Rains, we supply custom-engineered cable tray solutions designed to meet these exact needs. It replaces traditional methods such as conduit piping or manual. This is the online version of the current Combined Australian Customs Tariff Nomenclature and Statistical Classification or 'Working Tariff'. The following information is provided as a guide for general purposes only. Cable trays offer continuous support of cables, are lightweight, quick and straight forward to install just about anywhere, and generally mean that changing cabling. As a cabler, you need to be familiar with all the cabling rules and standards that apply to your work. In addition to the Telecommunications (Cabling Provider) Rules 2025, you also need to understand and follow: Telecommunications (Types of Cabling Work) Declaration 2024.
