## Key Takeaways

800G optical modules deliver ultra-high-speed data transmission up to 800Gbps, supporting multiple form factors, PAM4 modulation, and flexible deployment in data centers and high-performance networks. Key FeaturesHigh-Speed Transmission: 800G modules can process up to 800 Gigabits per second, more than doubling the capacity of 400G modules, enabling high-density, high-bandwidth data center and HPC network applications. Form Factors: Common package types include QSFP-DD, OSFP, QSFP112, and OSFP finned-top or flat-top designs, allowing flexibility for space-constrained racks or high-power core switches.

Modulation Technology: Most 800G modules use PAM4 (Pulse Amplitude Modulation 4-level), with DR4 modules employing 4x200G PAM4 and DR8 modules using 8x100G PAM4, supporting transmission distances up to 500 meters over single-mode fiber (SMF). Connectivity Options: Modules support multiple Ethernet configurations, including 800GE, 2x400GE, 4x200GE, and 8x100GE, providing backward compatibility and high port density for network upgrades. Power Efficiency: OSFP modules offer 8.5W–18W power options, while QSFP-DD modules operate within 16W–18W, optimizing energy consumption and reducing operational costs in large-scale deployments.

Optical Interfaces: 800G modules typically feature MPO-16 or MPO-12 connectors, supporting parallel single-mode fiber transmission. Variants like PSM8 use CWDM technology for 100m transmission, while FR (Fixed Reach) and LR (Long Reach) modules extend distances for longer network spans. Deployment Flexibility: These modules are suitable for AI applications, HPC, cloud computing, enterprise core/distribution layers, and service provider networks, enabling seamless upgrades from 100G/200G/400G to 800G networks.

Standards Compliance: Fully compliant with IEEE 802.3ck, IEEE 802.3cu, QSFP-DD MSA, OSFP MSA, and CMIS 5.3, ensuring interoperability and reliable operation across multi-vendor environments. Special Features: Some OSFP modules include LPO (Linear-drive Pluggable Optics) to eliminate DSPs, reducing latency and power consumption. QSFP-DD modules provide high port density and backward compatibility for cost-effective network upgrades.

### Summary800

G optical modules combine ultra-high-speed transmission, flexible form factors, PAM4 modulation, energy efficiency, and multi-standard compliance, making them ideal for modern data centers, AI/HPC networks, and large-scale cloud infrastructure. They support both short-reach and long-reach applications, offer backward compatibility with lower-speed networks, and enable scalable, cost-efficient network upgrades.
