Automatic switching device in distribution box

Overview

An Automatic Transfer Switch (ATS) is a critical element in low-voltage power distribution panels where continuity of supply is required for life safety, process continuity, IT loads, and essential building services. ABB offers automatic transfer switches (ATS), from 40 to 1600 Amperes in range. They have the features and functionality that makes them suitable for diverse applications: industrial plants, docks, airports and data centers. Are you looking for support or purchase information?

Download the white. Low-voltage automatic transfer switch assemblies provide a reliable means of transferring essential load connections between primary and alternate sources of electrical power. It monitors the main power supply continuously.
