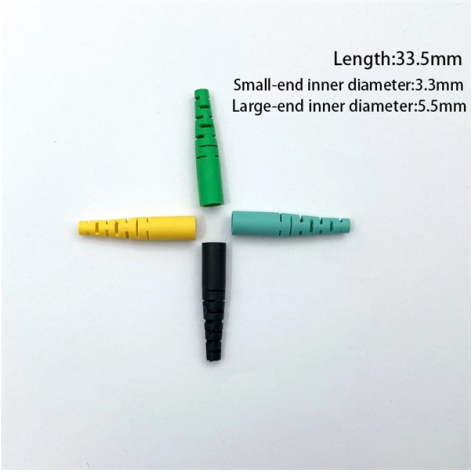
Fiber Bragg grating temperature sensing unit string



Overview

BraggSenz sensor system works on fiber Bragg grating (FBG) technology designed for multi-point temperature, strain, load, and vibration measurement over hundreds of meters of fiber optic cable in extremely harsh environments. This review provides a comprehensive overview of FBG sensor technology. Multiple standard gratings are continuously written on a single fiber to meet the needs of long-distance measurement or multi-point measurement, and improve the reliability and stability of the measurement system. T&S customizes various grating strings according to the needs of customers. No need. This example demonstrates a temperature sensor based on fiber Bragg gratings (FBG). The temperature-dependent change of the refractive indices of the fiber, consequently the shift of its Bragg wavelength, is used as a measure of the temperature.
