Cable tray tee length and dimensions specifications

Overview

Cable Tray Dimensions Guide: Standard Sizes, Tray We will first explain standard cable tray dimensions used across the industry, then examine how dimension.

Key Takeaways

Cable tray tees are available in standard lengths and can be ordered as equal or unequal tees, with dimensions specified as W1 x W2 x W3.

Tee Types and Ordering

Cable tray tees are used to branch a main tray run into two directions. They can be equal tees, where all three branches have the same width, or unequal tees, where the branch widths differ. When ordering, it is important to specify the widths of each branch using the format W1 x W2 x W3, where W1 is the main run width and W2 and W3 are the branch widths.

Standard Lengths

While straight cable tray sections typically come in standard lengths of 10 feet (3 meters) or 20 feet (6 meters), tee fittings are generally manufactured to match these lengths for compatibility with the main tray system. The exact length of the tee fitting depends on the width of the branches and the manufacturer's design, ensuring proper alignment and structural support.

Material and Compatibility Considerations

Material thickness affects load capacity and span; thicker tees support heavier cable loads. Side rail height and rung spacing are important for ladder-type trays to maintain structural integrity and heat dissipation. Tee fittings must be compatible with the straight tray sections in terms of width, depth, and material to ensure proper installation and grounding.

Practical Tips

Always confirm whether the tee is equal or unequal before ordering. Verify that the tee dimensions match the main tray width and the intended branch widths. Consider the load and cable fill requirements to select the appropriate material thickness and side rail height.

Use manufacturer-specific technical guides for precise dimensions, as specifications can vary between brands. By following these guidelines, you can ensure that cable tray tee fittings are correctly sized, structurally sound, and compatible with your overall cable management system.
