Fireproof sealing project for electrical distribution boxes

Overview

For trouble-free production and protection of the installed electronic devices, the modular control cabinet must be optimally sealed in its overall construction.

Key Takeaways

Electrical distribution boxes that penetrate fire-rated walls or are made of combustible materials require fireproof sealing to prevent fire and smoke spread.

Types of Boxes Requiring Fireproof Sealing

Consumer Units and Electrical Control Units (ECUs) Domestic and commercial consumer units made of combustible materials must be enclosed in fireproof cabinets or fitted with intumescent covers. These covers expand in a fire to create a seal around cables and conduits, preventing rapid fire spread and allowing safe evacuation and fire service intervention. Junction Boxes, Switches, and Outlets in Fire-Rated Walls Any electrical box that penetrates a fire-rated wall requires fireproof sealing.

This is typically achieved using intumescent putty pads, which restore the wall's hourly fire-resistance rating and prevent flames, smoke, and hot gases from passing through the penetration. Putty pads are not required for non-rated interior walls without fire or STC requirements. Control Cabinets and Modular Enclosures in Industrial Settings Industrial control cabinets housing sensitive electronics or critical systems should be sealed with fire-resistant gaskets or foams to protect against fire, dust, and moisture.

Standards like DIN EN 61439 (IEC 61439) recommend seamless gaskets for doors, panels, and ventilation openings to maintain enclosure integrity.

Standards and Regulations

International Building Code (IBC §714.5.2) governs firestop protection for penetrations through fire-rated assemblies, including electrical boxes.

IE

T Wiring Regulations require consumer units to be non-combustible or enclosed in non-combustible material. Fire-rated enclosures are tested to withstand fire for durations such as 30, 60, or 120 minutes, depending on the material and application.

Practical Considerations

Use intumescent putty pads for boxes in fire-rated walls to maintain fire-resistance ratings. For combustible consumer units, retrofit with fireproof covers or replace with non-combustible enclosures. Ensure seamless sealing of industrial control cabinets to protect electronics and maintain operational integrity during a fire.

In summary, any electrical distribution box that penetrates a fire-rated wall or is made of combustible material should have fireproof sealing, using intumescent pads, fireproof covers, or gaskets, in compliance with building codes and safety standards.

Enclosures and Distribution boxes | Sonderhoff

For trouble-free production and protection of the installed electronic devices, the modular control cabinet must be optimally sealed in its overall construction. This includes the rear wall, side panels, doors,

3M™ Fire Barrier Electrical Box Inserts | 3M United States

3M™ Fire Barrier Electrical Box Inserts are a flexible, one-piece fire-rated intumescent insert used to protect electrical boxes by adhering to the inside the box. When exposed to fire, the insert expands

AF E-Box | Fire protection for electrical boxes

Fire protection for electrical boxes AF E-BOX is an intumescent sleeves certified under EN 1366-3 for the EI 120 requalification of flexible and rigid walls with electrical and junction boxes inside.

Metacaulk Box Guard

© 2026 AK OPTICAL SYSTEMS - All rights reserved

Metacaulk Box Guard is a 1-component fire-rated pad for use in electrical boxes. When exposed to fire, it will expand forming a char that seals the opening, prevents spread of flames & limits temperature

Fire protection enclosures

ABB offers an innovative enclosure system for fire prevention, which is constructed of fireproof materials, features optimum technology and is available in a variety of economical designs.

How to Properly Seal an Electrical Box

Secure your electrical enclosures. Learn the critical difference between interior and exterior sealing materials for maximum safety and efficiency.

SEALING OF CONTROL CABINETS˜& ELECTRICAL

The prerequisite for the exact application of sealing foams, even in very small discharge quantities for very small housings with narrow grooves, is the contour-accurate FIPFG application with our fully

Fire-resistant boxes | Fire compartmentation IBMO

The IBMO Fire-Resistant Box provides a smart, maintenance-free solution for fire-resistant cable penetrations in walls and floors – ideal for data centers and buildings where frequent cable changes

ECU Fire Protection System for Distribution Boards

To protect against overheated ECUs, we''ve manufactured an ECU fire protection system consisting of an ECU cover housed with intumescent lining. The flexible cloth can nestle around cables, conduits

AF Junction Box | Fire protection for electrical boxes

Supply and application of AF JUNCTION BOX intumescent sleeves, consisting of Firefill 50/100 intumescent sleeve, pre-cut in the appropriate sizes, for EI 120 wall protection of electrical junction

Fire protection cable boxes: Spelsberg

All WKE cable junction boxes and junction boxes as well as the WKE AK distribution boards offer electrical intrinsic fire resistance between 30 and 90 minutes (E30 to E90) in the event of fire.

Fire Resistance in Electrical Enclosures: Material

A fire can cause catastrophic damage to electrical systems and pose life-threatening risks. But how can you safeguard your equipment? Fire-rated
