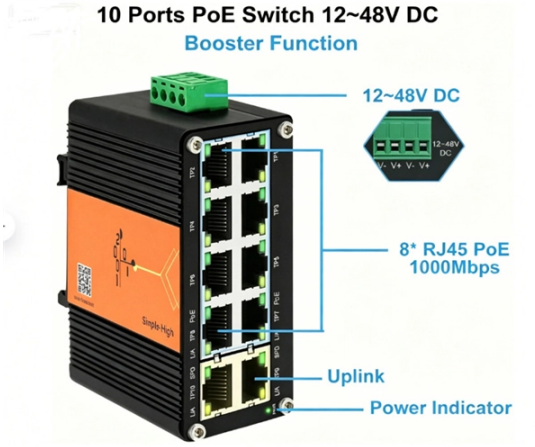
D2 optical module emits light



Overview

This gas emits a continous light spectrum in the UV range, so it is useful for background correction in different Spectrometers.

Article Content

D2 Deuterium lamps: Maassen GmbH

This gas emits a continous light spectrum in the UV range, so it is useful for background correction in different Spectrometers. Photron D2 lamps are designed to have the best possible light emmission

DEUTERIUM LAMPS (D2 LAMPS)

Deuterium lamps are light source lamps that utilize an arc discharge in deuterium (D2) gas. They emit an intense spectrum in the UV region and have feature of unrivaled stability compared to other UV

Deuterium arc lamp

A deuterium lamp uses a tungsten filament and anode placed on opposite sides of a nickel box structure designed to produce the best output spectrum. Unlike an incandescent bulb, the filament is not the source of light in deuterium lamps. Instead, an arc is created from the filament to the anode, a similar process to arc lamps. Since the filament must be very hot before it can operate, it is heated for approximately 20

FiberLight® D2 Portfolio

© 2026 AK OPTICAL SYSTEMS - All rights reserved

FiberLight ® D 2 is a compact UV-Vis light source designed for mobile spectroscopy applications and all types of handheld devices that require a low power

Deuterium light sources (D2) Quantum Design Europe | Quantum Design

Deuterium light sources (D2) Deuterium lamps provide the lowest wavelength output. A stable molecular deuterium discharge emits radiation through the UV, while VIS and IR are negligible. The silica

Heraeus FiberLight® D2 Modules

FiberLight® D2 is a compact UV-Vis light source designed for mobile spectroscopy applications and all types of handheld devices that require a low power

Ketra D2 Downlight – Malibu Wired Inc.

The only two-inch downlight with Ketra quality of light. Breakthrough optics and a smaller aperture allow the fixture to disappear into the ceiling,

D2 Lamps (Deuterium Lamp) – Logro Scientific

The deuterium lamp emits radiation extending from 112 nm to 900 nm, although its continuous spectrum is only from 180 nm to 370 nm. The

FiberLight D2 Lamp System | Excelitas

FiberLight D2 is the ideal light source for applications with limited space for equipment, whether stationary, portable/handheld, or even battery-driven

Deuterium Lamp for UV-Visible Spectroscopy

Deuterium lamps (D2) are light sources that use an arc discharge in low pressure Deuterium gas. They emit an intense spectrum in the UV region, delivering

DEUTERIUM LAMPS (D2 LAMPS)

Fails to light up due to decrease of internal gas during long-term operation Fails to light up when the lamp is hot and in case of re-igniting right after turning off rge in deuterium (D2) gas. They emit an

D2 Series

The D2 Series from Lumentum is a Pump Laser Module that incorporates a980 nm Laser Diode in a cooled fiber Bragg grating-stabilized design. This dual-chip

A Guide to Selecting Lamps | Oct 2010 | Photonics Spectra

For example, deuterium lamps emit ultraviolet (UV) wavelengths, while xenon and mercury-xenon lamps emit from UV to infrared (IR) wavelengths. Light intensity

FiberLight D2 Lamp System | Excelitas

© 2026 AK OPTICAL SYSTEMS - All rights reserved

The FiberLight D2 System is a complete UV-Vis light source, combining a deuterium lamp with a 0.25-watt tungsten lamp, a shutter, an optical system, and an SMA

Handling, Mounting, and Operating D2 High-Power Pump Lasers

D2 products operate the thermoelectric coolers (TECs) at 45°C, requiring new techniques for safely turning on the pump module. A separate application note describes ways to reduce low-power noise.

Deuterium arc lamp

Deuterium arc lamp A deuterium arc lamp (or simply deuterium lamp) is a low-pressure gas-discharge light source often used in spectroscopy when a

Vescent Accessory Modules

Electro-optic and Optical Ancilliaries Vescent Accessory Modules Vescent optical and electro-optical modules are designed to provide rugged, vibration immune

DBAL-D2 | Steiner High-Quality Optics

I received my DBAL-D2 yesterday and thoroughly read through the user manual (I''m like that; military aviator background) and finally had a chance to play around

Additional source notes

A deuterium lamp uses a and anode placed on opposite sides of a box structure designed to produce the best output spectrum. Unlike an incandescent bulb, the filament is not the source of light in deuterium lamps. Instead, an arc is created from the filament to the anode, a similar process to . Since the filament must be very hot before it can operate, it is heated for approximately 20 …
