Home AOC Optical Cable

Overview

An Active Optical Cable (AOC) is an integrated optical transceiver assembly that uses fiber optics to transmit high-speed data over longer distances than passive copper cables. The term "active" signifies that electrical components are used to boost and convert the signal along the way. Because of that, the cable is considered “active” — i. As with our recent DAC or Direct Attach Copper cable guide, we thought it would be useful to address the question, “What is a AOC?
