Core Switch Dual Mode

Overview

This chapter describes how to set up a basic dual-core topology with an MDS 9000 switch configured for interop mode 1 and a McData 6064 switch. Devices are connected to both core switches and all traffic must flow through both cores to reach its destination. Sitting at the top of the hierarchical model, core switches interconnect distribution layer switches and provide high-speed data transfer across. The number of optical cores in an optical fiber is the total number of equipment interfaces multiplied by 2, plus 10% to 20% of the spare quantity, and if the communication mode of the equipment has serial communication and equipment multiplexing, you can reduce the number of cores. It usually has powerful processing capabilities, high. Configure Two-Tier core switches as a VSX pair for Layer 2 aggregation of the data center access switches, IP data center services, and routing to the main campus.
