Electricity distribution box explodes during repair

Overview

A transformer explosion is caused by an internal short-circuit in the transformer. During short-circuit, oil temperature reaches 1200 degrees Celsius, and it gets vapored and evolves into explosive gas. Identifying the specific type of damage determines whether a non-invasive repair or a complete replacement is necessary. One common issue is a loose device resulting from stripped mounting screw threads within the box. Constant force from plugging and unplugging devices degrades the plastic or. There are many reasons causes arc flash incidents. Manual racking in and racking out circuit breakers poses potentially lethal arc flash. Those I don't really worry about - worst that could happen is a light fixture pops, and they're explosion-proof anyway. Probably the most nervous I've been was when I cross-connected the Wisconsin's four buses. Flipping 1600 amp motorized breakers that haven't moved since 1991 in a pitch-dark. In this video, we witness a dramatic arc flash explosion that occurs while a high-voltage (HV) circuit breaker is being rolled into a panel.
