Optical Splitter Technical Specifications

Overview

Each Splitter will be conditioned by unit. The Splitter is maintained in the packaging and the fibers are arranged by respecting the minimum bend radius of 15mm.

Key Takeaways

Optical splitters distribute or combine light signals from one fiber to multiple fibers, with specifications covering optical performance, mechanical structure, materials, and environmental tolerances.

Overview

Optical splitters are passive devices used in FTTH, PON, and Ethernet networks to split or combine optical signals, enabling point-to-multipoint communication. They are available in 1xN and 2xN configurations, with customizable split ratios to meet network requirements. Splitters can be bare, connectorized, or module-based, suitable for indoor and outdoor deployment.

Optical Performance

Insertion Loss: Typically ≤3.8 dB for PLC splitters, depending on split ratio. Polarization Dependent Loss (PDL): ≤0.2 dB. Wavelength Range: 1260–1650 nm, covering standard telecom bands.

Uniformity: Even distribution of optical power across output ports.

Optical-PLC-Splitter-Specification

Each Splitter will be conditioned by unit. The Splitter is maintained in the packaging and the fibers are arranged by respecting the minimum bend radius of 15mm. The packaging protects the Splitter from

FTTH Optical Splitter Technical Specification

The data and original catalogs on the structure, specifications tolerances, and installation and methods of each materials shall be presented. ※FTTH Optical Splitter Specification Page 4 / 9

Ficha_Splitters

Cassette splitter is the most commonly used in the PON networks, and it has the complete protection for inner optical components and cable, as well as the convenient installation and easy to use, but its

Planar Light Circuit (PLC) Optical Splitters

Corning''s Planar Light Circuit (PLC) splitters are fully passive optical branching devices that exhibit uniform signal-splitting for the most advanced optical networks.

Optical Splitters for Central Office/Headend

Passive optical devices, singlemode PLC and FBT devices bare splitters and couplers specification and ordering guide. CommScope offers a portfolio of bare

OPTICO1x128 PLC Splitter Datasheet

Planar lightwave circuit (PLC) splitter is a type of optical power management device that is fabricated using silica optical waveguide technology to distribute optical signals from Central Office (CO) to

Datasheet PLC Splitter

The PLC Splitter is designed to split one or two optical signals into multiple output ports. It features low insertion loss, high uniformity and low polarization dependent loss.

Bare Fiber PLC Fiber Splitter Data Sheet | FS

© 2026 AK OPTICAL SYSTEMS - All rights reserved

FS Bare Fiber Splitters are engineered for high-density networks, offering exceptional scalability and reliability. FS PLC splitters come in a full range of 1xN and 2xN models, with customizable split ratios

SPL2605 Compact Optical Splitter Datasheet 02

Overview The SPL2605 can be independently integrated into an FDT or FAT, or encapsulated in a tray-mounted splitter SPL9201 for optical splitting in an ODF and FDT. The splitter

Optical Splitter

The Optical Splitters “split” the input optical signal received by it on input optical ports and provide the outputs simultaneously, in a pre-specified ratio 90:10 or 80:20.

What Is an Optical Splitter?

What''s an optical splitter? How does the fiber optic splitter work? How many fiber splitter types? How to choose the right fiber splitter? Find the

Optical Beamsplitters | Beamsplitter Selection | Edmund

Find top-quality Beamsplitters for laser systems & more. Shop a variety of beamsplitters at Edmund Optics for precision light splitting needs. Click Here!

What are Beamsplitters?

Beamsplitters are optical components used to split incident light at a designated ratio into two separate beams. Additionally, beamsplitters can be used in reverse to combine two different beams into a

PASSIVE OPTICAL SPLITTER

The GR-1209 standard details comprehensive optical performance criteria for a passive optical splitter. There are six main specifications that are outlined in the standard.

Beam Splitter Selection Guide

Overview An Optical Beamsplitter is an optic or optical device that is used to split a beam of light in two. Newport offers a wide variety of Beamsplitters in various shapes. Circular beamsplitters, plate

Comprehensive Introduction of Fiber Optic Splitter

Fiber optic splitter is significant in helping users maximize the performance of optical network circuits. This article will help you to gain more knowledge of fiber splitter manufacturing, fiber

Your Go-to Guide to Optical Splitter

© 2026 AK OPTICAL SYSTEMS - All rights reserved

The optical splitter is an optical power distribution device that splits one optical signal into multiple optical fiber signals to achieve multichannel transmission.

Understanding Fiber Optic Splitters: Principles,

4. What are the common types of fiber optic splitters? The common types of fiber optic splitters include the planar waveguide splitter, tree-like splitter, star coupler,
