Fiber optic 86-type panel network port model

Overview

□exclusive for 2026 projects□86-type fiber optic panel, single sc port. Type 86 fiber optic panel: 1688 wholesale preferred, a smart choice for efficient.

Key Takeaways

An 86-type fiber optic panel is a compact, wall-mountable network panel designed to house fiber optic or Ethernet ports, typically measuring 86mm x 86mm and compatible with standard 86-box electrical sockets.

Overview

The 86-type fiber optic panel is commonly used in homes, offices, and enterprise environments to provide a neat and organized interface for fiber optic or Ethernet connections. Its name comes from its 86mm x 86mm dimensions, which match standard wall-box sockets, allowing easy installation in existing electrical boxes. These panels are designed to terminate fiber jumpers or modular network jacks, facilitating connections to devices such as fiber routers, switches, or other network equipment.

Port Configuration

Single or dual-port options: Panels can have one or two fiber or network ports, supporting multiple connections in a compact form factor. Fiber optic support: Many 86-type panels accommodate SC, LC, or other fiber connectors, ensuring precise termination and minimal signal loss. Ethernet compatibility: Some panels, like the Panduit MiniCom CFPL86F2SAW, support Cat5e, Cat6, Cat6a, and fiber jacks, making them versatile for mixed network environments.

Design and Features

Modular and maintainable: Panels often feature a modular design for easy installation, removal, and maintenance. Identification and labeling: Many models include identification covers or labels for each port, simplifying network management and troubleshooting. Durable construction: Panels are typically made from flame-retardant ABS plastic or similar materials, providing safety and long-term durability.

Aesthetic and functional design: Rounded corners, angled adapter installation, and front-back double panel designs help protect connectors and maintain a clean appearance. ApplicationsFTTH (Fiber to the Home): Used to terminate fiber connections from the service provider to the user's equipment. Enterprise networks: Provides structured cabling solutions for offices, schools, hospitals, and data centers.

Home networking: Enables organized wall-mounted connections for high-speed internet and smart home devices.

Installation and Maintenance Tips

Keep fiber connectors clean and dry to prevent signal degradation. Handle fiber jumpers gently to avoid breakage or connector damage. Use the panel's labeling system to track connections and simplify troubleshooting.

In summary, an 86-type fiber optic panel network port is a versatile, compact solution for terminating and managing fiber or Ethernet connections in wall-mounted applications, offering modularity, durability, and compatibility with a variety of network standards.
