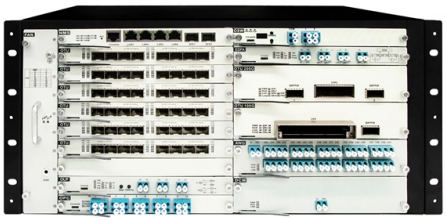
OS5 Single-Mode Fiber Optic



Overview

This document outlines the specifications for a single-mode optical fiber and cable designed for use around the 1310 nm zero-dispersion wavelength, suitable for both the 1310 nm and 1550 nm regions, and compatible with analogue and digital transmission. In the complex landscape of fiber optic infrastructure, selecting the right cable type—single-mode (OS1/OS2) or multimode (OM1/OM2/OM3/OM4/OM5)—can define a network's speed, reach, and cost-effectiveness. In practical selection, OM fiber is usually chosen for short-distance LAN and data center links, while OS fiber is used for longer backbone, campus, FTTH and telecom transmission. As a professional fiber optic cable manufacturer and OEM supplier, Getek provides a. This comprehensive guide explores Single-Mode Fiber Optic Cable, covering technical specifications, deployment scenarios, and best practices to help you optimize your fiber infrastructure for maximum performance and reliability. What Is Single-Mode Fiber Optic Cable?

Single-mode fiber optic cable. Fiber optic cables used in telecommunication are broadly categorized into two types – Multimode fiber and Single-mode fiber cables. In ISO/IEC 11801 and EIA/TIA standards five types of Multimode –. OM5 multimode fiber optic cables have a core diameter of 50 microns, which allows them to transmit data over distances of up to 1000 meters at a speed of 40 gigabits per second (Gbps), and up to 150 meters at 100 gigabits per second (Gbps). The OM5 designation refers to the cable's optical.
