Fiber optic cable flame retardant performance model

Overview

This short guide explains the commonly used materials — LSZH and PVC — how industry fire-rating systems (plenum, riser, vertical flame tests) work, and practical tradeoffs so you can pick the right cable for the space and code requirements. The cable has a design that ensures operation for more than 3 hours in fi es up to 1000 °C. In addition, also with water spray and. ETK Kablo 's fire-resistant fiber optic cables ensure continuous data transmission during fire conditions, safeguarding critical communication lines when reliability is most crucial. This brings flexibility and lower bending radius tha provides a high rodent protection. Cables are specially designed to withstand the strict flammability tests of IEC 60331-25.
