Fiber optic cable lifting weight

Overview

Most fiber optic cables boast a pull strength of 100 – 200 pounds thanks to the internal kevlar or aramid yarn, known as the strength member. Vertical rise Upward lifts add direct weight tension. Extra pull slack Service loop slack that still travels through the route. Conduit bends / elbows Count each directional bend in the pull path. Lubricant reduction. The equations below can also be used for cables only loaded with their own weight as long as the sagging height (h) vs. The cable follows the shape of a parable and the horizontal support forces can be calculated as R1x = R2x = q L2 / (8 h) (1) where R1x = R2x =. rial environments. The outer sheath is made from black UV-stabilized and weather resistant material which is SHF1 classified, and may be exposed for shorter periods to fluids such as diese and mineral oils. Solve for the missing value or estimate weight from conductor size.
