Overview

Inter-car jumpers connect high voltage roof-lines on separate cars. The U-connector and the L-joint connector are rail approved products designed for interconnection of high voltage electric equipment on locomotives, Electric multiple units (EMU's) and high speed trains. it collects the power at single point. In HV and EHV. To connect various high voltage (HV) components to the HV system, TE also delivers a wide variety of busbars. The HC-STAK Busbar. Busbars are constructed from conductive metal bars, typically made of copper or aluminum, with a large cross-sectional area and insulated by specialized materials. The working principle of busbars is. An electric busbar is defined as a single conductor or a group of conductors that serve the purpose of collecting electrical power from incoming feeders and distributing it to outgoing feeders. Bus bars have been present in power distribution systems for many years. In their most basic form, bus bars are large conductors used to transmit significant.
