Industrial Switch Operating Humidity

Overview

The switch is rated to operate at 8- to 80-percent relative humidity, with a humidity gradation of 10 percent per hour. Humidity is often underestimated in network deployment planning. However, in industrial and semi-industrial environments, high moisture levels can significantly impact the performance, reliability, and lifespan of network switches. Standard commercial switches, typically designed for offices or. Why Humidity Matters in OT Networks Unlike IT environments, OT networks operate close to the physical world. Where This Risk Commonly Appears If your network. When building an IIoT system, the stability and reliability of the network infrastructure are crucial. With more and more outdoor applications, Ethernet switches are going to the extreme and need to operate.
