Latest Cable Tray Thickness Standard

Overview

Cable Tray Thickness Standard 2026: Key GuidelinesThis report provides a comprehensive analysis of cable tray thickness standards, material specifications.

Key Takeaways

The latest international standard for cable tray thickness is specified in IEC 61537: 2023, which provides prescriptive thickness tables based on material, span, and load requirements.

IE

C 61537: 2023 OverviewIEC 61537: 2023 is the most recent edition governing metal cable tray and ladder systems. It specifies requirements for mechanical strength, corrosion resistance, electrical continuity, and load-bearing capacity. The standard applies to trays made of steel, stainless steel, aluminum, or other metallic materials and includes detailed thickness tables for different tray types and spans, ensuring structural integrity under specified loads and environmental conditions (IEC 61537: 2023,).

Thickness Requirements

Steel trays: Thickness depends on span, load class, and corrosion category. For example, hot-dip galvanized steel trays typically require thicker material than electro-galvanized trays to achieve equivalent strength and corrosion protection (ABB Technical Guide,). Aluminum trays: Selected alloys are chosen for mechanical strength and corrosion resistance.

© 2026 AK OPTICAL SYSTEMS - All rights reserved

Thickness is generally lower than steel due to aluminum's high strength-to-weight ratio (ABB Technical Guide,). Stainless steel trays: AISI 316L is commonly used for high-corrosion environments, with thickness determined by load and span requirements (ABB Technical Guide,).

IE

C 61537: 2023 also introduces granular corrosion classifications and includes annexes for using trays as protective earth conductors, which can influence material selection and thickness (Apex Tray Comparison,). Comparison with Other StandardsNEMA: Does not prescribe minimum thickness; instead, trays must pass load tests for the specified span. Thickness is determined by manufacturer's design to meet rated load (Apex Tray Comparison,).

BS E

N 61537: Technically identical to IEC 61537 but includes UK-specific guidance. Thickness tables and corrosion classifications follow IEC 61537: 2023 (Apex Tray Comparison,).

Practical Guidance

Select tray material based on environment (corrosive, marine, industrial).

Check IE

C 61537: 2023 thickness tables for the specific span and load class. Verify manufacturer compliance with IEC 61537: 2023, especially for international projects. Consider corrosion protection: hot-dip galvanization, stainless steel, or aluminum coatings affect required thickness.

Account for electrical continuity if trays are used as protective earth conductors.

Following IE

C 61537: 2023 ensures safety, durability, and compliance for modern cable tray installations, while also providing guidance for material selection, load capacity, and environmental resistance.

Cable Tray Thickness Standard 2026: Key Guidelines

This report provides a comprehensive analysis of cable tray thickness standards, material specifications, and market trends as of May 2026. It covers both industrial-grade infrastructure and

IEC 61537:2023 | IEC

IEC 61537:2023 specifies requirements and tests for cable tray systems and cable ladder systems intended for the support and accommodation of cables and possibly other electrical equipment in

GUIDE CABLE TRAYS TECHNICAL

NEMA VE 1-2017 Specifies requirements for metal cable trays and associated fittings designed for use in accordance with the rules of Canadian Electrical Code, Part I and the National Electrical Code®

Cable Tray Technical Guide A practical guide to product selection and ...

Cable Tray Technical Guide A practical guide to product selection and installation This guide for engineers and installers has been developed by ABB as a practical reference regarding cable tray

IEC Standard for Cable Tray: Complete Technical Guide

IEC 61537 is the internationally recognized benchmark for metal cable tray systems. It applies to cable trays made of steel, stainless steel, aluminum, or

NEMA Standards Publication VE 2-2018

Tray-rated cables are required for cable tray installation, so using a channel cable tray system or wire mesh system for exits may be more convenient and economical.

IEC 61537:2023

This document specifies requirements and tests for cable tray systems and cable ladder systems intended for the support and accommodation of cables and possibly other electrical equipment in

Cable Tray Thickness Guide: Which Thickness Should You Choose?

Learn how to choose the right cable tray thickness for industrial, commercial, and infrastructure projects. Explore GI cable tray thickness standards, load capacities, and selection

Cable Tray Dimensions Guide: Standard Sizes, Tray Types & Sizing

© 2026 AK OPTICAL SYSTEMS - All rights reserved

Explore standard sizes by tray type, understand width and depth limits, and see how to calculate and choose compliant cable tray sizes for real projects.

NEMA vs IEC vs BS: Global Cable Tray Standards Comparison

Note: NEMA does not specify minimum thickness —the philosophy is that if the tray passes the load test at the specified span, the thickness is adequate. IEC/BS takes a more

Cable Tray Specification Overview

SPEC Cable Trays - Free download as Word Doc (.doc), PDF File (.pdf), Text File (.txt) or read online for free. This document provides a general specification for cable trays for an electrical project. It

Cable Tray Size Calculation for Project Engineers

Cable tray size calculation is important for ensuring safe cable installation, proper heat dissipation, and enough spare capacity for future

Full cable tray systems specification document

B. Cable tray systems are defined to include, but are not limited to straight sections of [ladder type] [trough type] [solid bottom type] [channel type] cable trays, bends, tees, elbows, drop-outs, supports

NEMA vs IEC vs BS: Global Cable Tray Standards

1. Introduction: Why Standards Matter 1.1 The Global Standards Landscape When specifying cable trays for an international project, the first

IEC Standard for Cable Tray: Complete Technical Guide

Understanding the IEC Standard for Cable Tray Cable trays play a vital role in supporting electrical cables and wires in commercial, industrial, and

LEGRAND CABLE TRAYS TECHNICAL GUIDE

Not all cable trays are equivalent. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our

The latest national standard for cable tray, different

There are many national standards for cable tray, and the technical specification of T/CECS 31-2017 steel cable tray is the latest standard, in which different

IEC 61537:2023 Cable management

© 2026 AK OPTICAL SYSTEMS - All rights reserved

Where necessary, cable tray systems and cable ladder systems can be used for the arrangement of cables into groups. This document does not apply to conduit systems, cable trunking systems and
