NdFeB ICP Spectrometer

Overview

A bench top simultaneous ICP spectrometer with a vertical torch, a purged echelle polychromator and Charge Injection Device (CID) array detector. NdFeB magnets are becoming a significant source of neodymium, a rare-earth element critical to many technologies and a potential substitute for traditional mining of the element. To address this, we meticulously tested nitric acid, hydrochloric acid, acetic acid, and citric acid, all at a. Neodymium-Iron-Boron (NdFeB) magnets are the strongest type of permanent magnets available today, made from an alloy that includes neodymium, iron, and boron. The importance of the pretreatment of samples in Nd quantification from NdFeB magnets through inductively coupled plasma atomic emission spectroscopy (ICP-OES)-a rapid and streamlined methodology. Journal of Environmental Science and Health. MEDLINE Bookends Endnote Papyrus Procite Refman Quickdoc Format. The importance of the pretreatment of. ICP emission spectrometers are divided into three categories according to different excitation types and detection systems: Spectrograph. Standards and Requirements for Using NdFeB Magnets Application and Development of Industrial NdFeB Magnets How to Solve the Corrosiveness of NdFeB Magnets Supply. We report on the behavior of NdFeB magnet samples exposed to four different acid media for digestion.

Article Content

The importance of the pretreatment of samples in Nd quantification

The importance of the pretreatment of samples in Nd quantification from NdFeB magnets through inductively coupled plasma atomic emission spectroscopy (ICP-OES)-a rapid and streamlined

The importance of the pretreatment of samples in Nd quantification

We report on the behavior of NdFeB magnet samples exposed to four different acid media for digestion. NdFeB magnets are becoming a significant source of neodymium, a rare-earth element critical to

Composition Analysis of Neodymium Magnets via ICP

This article delves into the methodology and significance of analyzing the chemical composition of NdFeB materials, employing Inductively Coupled

NdFeB chemical composition analysis (ICP analysis)

The analysis of hydrogen, oxygen, and carbon in magnets will be discussed in the next issue. The composition analysis of NdFeB is the same as

Accurate and High-Precision Analysis of Elements in a Neodymium

Inductively coupled plasma–optical emission spectroscopy (ICP-OES) is widely used for elemental analysis due to its high matrix tolerance, multi-element analysis capability, low detection limit and

Determination of Boron in NdFeB Alloy by Inductively Coupled Plasma ...

Abstract. The alkali melting method was used to pretreat the specimens of Neodymium-iron-boron alloy, and the inductively coupled plasma atomic emission spectrometer was used to determine the main

Inductively Coupled Plasma Atomic Emission Spectroscopy

Inductively Coupled Plasma-Optical Emission Spectroscopy (ICP-OES) ICP–OES (or ICP-Atomic Emission Spectroscopy, ICP-AES) systems excite atoms to emit analytically useful radiation using

Application of Portable Total-Reflection X-Ray

Here, we report a method of measuring the dysprosium composition in a NdFeB magnet on-site using a portable total-reflection X-ray fluorescence

Elemental Analysis of NdFeB Magnet Alloys by ICP-OES

© 2026 AK OPTICAL SYSTEMS - All rights reserved

The Avio® 550 Max fully simultaneous ICP-OES delivers precise high-res analysis of major and minor elements in NdFeB magnet alloys with MSF, UDA, and Flat Plate plasma.

Accurate and High-Precision Analysis of Elements in a Neodymium

This work demonstrates the ability of the Avio ® 550 Max fully simultaneous ICP-OES to accurately measure major and minor elements in an NdFeB alloy, leveraging its high-resolution mode along

Chemical composition analysis of neodymium iron

3. Types of ICP emission spectrometer ICP emission spectrometers are divided into three categories according to the excitation type and detection system: *

Determination of rare earth elements in CRT phosphors and NdFeB

Determination of rare earth elements in CRT phosphors and NdFeB magnets residues using an ED-XRF portable spectrometer to assist field semi-quantitative screening

Quantitative analysis of dysprosium in coated NdFeB used magnets

Alternative techniques for elemental characterization of NdFeB magnets were studied by other authors, like neutron-induced gamma-ray spectrometry or inductively coupled plasma

Inductively coupled plasma mass spectrometry

Inductively coupled plasma mass spectrometry (ICP-MS) uses a plasma to ionize samples, followed by detection with mass spectrometry. This Primer discusses the major analytical variants of

Determination of rare earth elements in CRT phosphors and NdFeB

Request PDF | On Feb 1, 2024, Filipe M.J. Figueiredo and others published Determination of rare earth elements in CRT phosphors and NdFeB magnets residues using an ED-XRF portable spectrometer

How ICP-OES changed the face of trace element analysis: Review of

The 50th anniversary of Inductively Coupled Plasma-Optical Emission Spectrometry (ICP-OES) will be observed in 2024. ICP-OES was first commercially av

IOS Press Ebooks

Abstract The alkali melting method was used to pretreat the specimens of Neodymium-iron-boron alloy, and the inductively coupled plasma atomic emission spectrometer was used to determine the main

Comparative Studies of Digestion Techniques for the

© 2026 AK OPTICAL SYSTEMS - All rights reserved

The digestion of neodymium (NdFeB) magnets was investigated in the context of recycling rare earth elements (i.e., Nd, Pr, Dy, and Tb). Among more
