Optical Module 1310 Band

Overview

A 1310nm optical module lets you move data efficiently through fiber optic communication networks. As part of the O-band (1260–1360 nm), it balances low dispersion, stable performance, and cost efficiency. This makes it widely adopted in data centers, enterprise backbones, and metro access. Thorlabs' single-frequency, turnkey, low-noise laser systems at 1310 nm are ready-to-use laser systems that integrate a low-noise driver and temperature stabilization inside of a benchtop housing. To minimize the laser linewidth and relative intensity noise (RIN), these lasers include drive. Laser Diode < 1100nm Fabry Perot Coaxial Laser Diode Fabry Perot Compact Module Laser Fabry Perot Butterfly Laser Diode DFB Butterfly Laser Diode VCSEL Coaxial Laser Diode High Power Pump Laser Module > 1100nm CWDM DFB Coaxial Laser Diode CWDM DFB Coaxial Laser Diode Polarization Maintaining CWDM. Wavelengths of 1310 nanometers are integral to advanced telecommunications, medical imaging, environmental sensing, and scientific research, delivering stable, low-dispersion light suitable for both long- and short-range optical applications. With low chromatic dispersion and minimal water. The SOAA provides cost-effective solutions for 1310nm O-band optical amplification. Two configurations are available: Polarization Maintaining (PM) fiber or Single Mode (SM) fiber input/output. Center Wavelength 1310nm, Output optical power ≥10mW/10dBm, Small signal gain 20dB, Optical fiber interface FC/APC This product is used to amplify optical signals with wavelengths near 1310nm, and can achieve 1290nm, 1310nm single or multi-wavelength amplification.

Everything You Need to Know About 1310nm Optical

A 1310nm optical module lets you move data efficiently through fiber optic communication networks. As part of the O-band (1260–1360 nm), it

Low-Noise, Narrow-Linewidth Laser System, O-Band

Thorlabs'' single-frequency, turnkey, low-noise laser systems at 1310 nm are ready-to-use laser systems that integrate a low-noise driver and temperature

1310 nm Phase Modulator (PM-1310 Series) – Optilab

DFB 14-Pins Butterfly Direct Modulation Laser. DFB 14-Pins Butterfly Continous Wave (Type 2) DFB Electro Absorption Modulator Laser Diode. DFB Dual in-line Laser Diode. VCSEL Coaxial Fixed

1310nm Laser Diodes, Comb, Fabry–Perot Lasers, SOA, Gain Chips

Applications of 1310 nm diodes In telecommunications and datacom, 1310 nm lasers are core to fiber optic communication, particularly within the "O-band," supporting high-speed, low-dispersion data

Fiber Optical Amplifier 1250-1350nm O-Band (up to 16dBm)

The SOAA provides cost-effective solutions for 1310nm O-band optical amplification. It is a semiconductor with a fiber-coupled waveguide structure. Two configurations are available:

1310nm Semiconductor Optical Amplifier (SOA) Module

This product is used to amplify optical signals with wavelengths near 1310nm, and can achieve 1290nm, 1310nm single or multi-wavelength amplification.

CWDM 1310 Wide Band-Passive Optical Components_Fiber Optic

HyOptic CWDM LGX cassette module with 1310 wide band is optical multiplexer based on TFF technology, multiplex different CWDM wavelengths into single fiber for transmission to remote.

XG-SFP-LR-SM1310 10GBASE-LR SFP+ 1310-nm 10-km DOM

XG-SFP-LR-SM1310 10GBASE-LR SFP+ 1310-nm 10-km DOM Duplex LC SMF Optical Transceiver Module Applicable to data center and campus networks, enabling cost-effective, efficient, and high

NY13D Series – 1310nm Microwave DFB Laser Module

© 2026 AK OPTICAL SYSTEMS - All rights reserved

NY13D series laser module is a directly modulated DFB laser that provides exceptional performance for linear fiber optics communications in very wide

What is the difference between 1310nm and 1550nm SFP□

In summary, there are differences between optical modules of different wavelengths in terms of operating frequency bands and transmission characteristics. Optical modules with different

1310/1550+1590 nm Filter Wavelength Division Multiplexers

Lumentum 1310/1550+1590 nm filter wavelength division multiplexers (WDMs) use interference filter technology to separate or combine optical signals.

The FOA Reference For Fiber Optics

Fiber Optic Network Optical Wavelength Transmission Bands As fiber optic networks have developed for longer distances, higher speeds and wavelength

1 x WDM, 1310/1550 wide band in fiber optic cassette

Fiber optic patch panel module with WDM multiplexer and demultiplexer terminated in LC connectors. Passive WDM panels are a reliable and reasonable method for

1310nm Single Mode Fiber Optical Transceivers Explained

A 1310nm single mode fiber optical transceiver is one of the most widely used optical transceivers in modern fiber-optic networks, especially for short-to-medium distance transmission over single-mode

AC Photonics Inc

ACP''s capabilities have been exceeding your most demanding OEM passive component challenges with complex and effective solutions. We excel at

Why do we use 1310 and 1550?

In the realm of optical fiber communication, the wavelengths of 1310 nm and 1550 nm are of paramount importance. These specific wavelengths are not chosen arbitrarily; rather, they are the result of

SFP+10G 1310nm 10Km LC Optical Module Guide

SFP+10G 1310nm 10Km LC Optical Module Detailed Specifications The SFP+10G 1310nm 10Km LC optical module is a widely used long-range transceiver. Here
