Optical module coated with conformal coating

Overview

From a reliability and compliance engineer's perspective, this article explains Conformal coating's role in meeting standards such as GR-468, and how it must be coordinated across design, manufacturing, and test. Telcordia GR-468-CORE is a gold standard for opto-electronic reliability assurance. This applies, for example, to automotive applications, defense technology, aerospace, marine, lighting, and industrial. formance even in the harshest environments. Our tools enable the reliable data collection, performance trend analysis, and ensure your products meet the h metry of. Atomic Layer Deposition is a high-performance coating technology based on self-limiting surface reactions of precursors (starting materials for chemical reactions) and reactants (substances consumed during chemical reactions, e. They are to guarantee protection against moisture as well as chemical influences.
