Recommended Cold Joint Models

Overview

Multiple linear regression (MLR), random forest regression (RFR), and support vector machine regression (SVR) prediction models for cold joint shear strength were established based on rigorously screened variables and comprehensively evaluated using multiple methods. by Kho Pin Verian, Jarron Ashcroft, Matthew Carli, Randall Bright, Eerik Maandi Question: Difference between a contraction joint, isolation joint, expansion joint, construction joint, an. Cold joints in extruded concrete structures form once the exposed surface of a deposited filament dries prematurely and gets sequentially covered by a layer of fresh concrete. For this purpose, after validating a concrete beam-to-column connection with a cold joint in Abaqus software, 20 models. Ziqin Zhong, Shixing Zhao, Jing Xia, Qirui Luo, Qiaoling Zhou, Shuheng Yang, Fei He, Yu Yao Journals: Structures Abstract The shear resistance of cold joint in concrete is influenced by various design parameters. Traditional mechanical models typically consider only a limited number of parameters. Based on the structural characteristics of the belt conveyor, laser ranging technology, and GNSS-RTK positioning technology, an algorithm is proposed to determine the operating status of the belt conveyor, calculate the position and area of the mixed material, and record the pouring and compaction. In this paper, the problem of the generation of cold joints is approached from two complementary perspectives.
