How much does a horizontal optical cable terminal box cost

Overview

Can orderly store fiber connector and remaining fiber, in which the storage disc can be up to four layers large capacity and adjusted according to the number of cores connected by the optical cable.

Key Takeaways

Horizontal optical cable terminal boxes typically range from $50 to $250 depending on capacity, material, and features. Horizontal optical fiber terminal boxes are used to protect, manage, and distribute optical fibers in FTTH networks, supporting wall-mounted or horizontal installation. Prices vary based on several factors: 1.

Capacity and Ports: Boxes can hold 12, 24, or up to 96 fibers, with core capacity per tray of 12 or 24 fibers. Higher capacity boxes generally cost more. 2.

Material and Build: Most boxes are made of cold-rolled steel with plastic coating or durable plastic, and some are IP65-rated for outdoor use, which increases cost. 3. Features: Additional features like PLC splitters, waterproof sealing, pressure testing valves, and earth grounding devices can affect pricing.

Boxes with multiple cable ports (2–4 or more) and flexible entry/exit options are more expensive. 4. Vendor and Brand: Prices differ between suppliers.

For example, Amazon and Fiberinthebox offer standard indoor boxes starting around $50–$100, while high-capacity or outdoor waterproof models from manufacturers like Softel or OPELINK can reach $200–$250 or more. 5. Installation Type: Horizontal boxes designed for aerial, underground duct, or direct burial applications may include mounting brackets and accessories, slightly increasing the price.

Summary: For budgeting purposes, expect small indoor horizontal boxes (12–24 ports) around $50–$100, and larger or outdoor-rated boxes (48–96 ports) around $150–$250. For exact pricing, it is recommended to check vendor websites or request a quote based on your required specifications.
