# Large Capacity Optical Module

## Overview

This article unpacks the technologies powering this leap (silicon photonics, advanced modulation, and co-packaged optics), compares deployment paradigms, and delivers a tactical upgrade roadmap that balances performance, cost, and scalability. Although co-packaged optics (CPO) and on-board optics (OBO) have been proposed to increase bandwidth density, these approaches introduce significant challenges in field serviceability, scalability, and manufacturability, making them difficult to deploy widely in hyperscale environments. To. From cloud data centers to metro and long-haul networks, 400G—particularly coherent variants like ZR and ZR+—is helping eliminate bandwidth bottlenecks and support the growing demands of AI, big data, and next-generation digital services. This article explores the enabling technologies, performance. Contributing to the realization of digital transformation (DX) by enabling high-speed/high-capacity optical fiber communication when equipped in large-scale data centers, optical fiber communications for homes (FTTH), mobile communication base transceiver stations (BTS) such as 5G, and various. Cisco optics are foundational to AI data centers. They deliver performance, efficiency, and reliability for AI workloads that maximize uptime and return on AI investments. 6T optical modules differ primarily.
