# User-pre-buried distribution box

## Overview

A prefabricated substation (also called a "box-type substation") integrates high-voltage switchgear, transformers, and low-voltage distribution equipment in a compact enclosure. It offers several advantages such as a compact structure, easy installation, reliable performance, and. The invention discloses a kind of pre-buried installation methods of distribution box on concrete wall, first make support device, then described support device one end is caught in the cabinet of distribution box, the distribution box is hung on into predeterminated position again, reserved. The UGS Manual provides guidance and standards pertaining to installing and working with underground structures for electrical facilities. The UGS Manual includes general information on concrete, steel, precast reinforced concrete structures and pull ropes, conduits, fittings and risers, handholes. Preassembled buried box is a kind of electric power equipment designed and developed to meet the requirements of the above fields. The pre-installed buried box transformer is a new type of compact transformer which is composed of transformer, high voltage load switch and fuse, etc. It is widely used in urban buildings, both sides of roads, residential areas, municipalfacilities, mines, oil felds, ports, tourist. Murrelektronik's passive distribution boxes provide a much more convenient method for connecting sensors and actuators to the control cabinet. We custom design each system based off of your project needs. For building owners, architects, construction managers, facilities engineers, and network.
